

PALOMAT[®] 5

Efficient pallet flow - no manual lifting of pallets

Semi-automatic stacking and destacking

You insert or remove 1-5 pallets using a hand pallet truck, electric stacker or a full-size forklift truck. All handling is carried out at floor level.

The PALOMAT[®] 5 should be activated manually each time it is to perform a function; with just a tap on the reset- and next the start button the PALOMAT[®] performs the stacking or destacking function. The PALOMAT[®] 5 figures out itself if it should stack or destack. Handles max 15 to 25 pallets.

If, for example, you wish to remove 3 pallets from PALOMAT[®] 5, you will simply indicate this by selecting "3" on the adjustment knob and by pushing the reset- and next the start button.

During stacking, the PALOMAT[®] 5 is always ready to receive 1-5 pallets.

The pallet magazine PALOMAT[®] 5 includes a maximum indicator for 15 or 25 pallets, which is integrated in the PALOMAT[®]. When 15/ 25 pallets are loaded, the PALOMAT[®] destacks the entire stack.

The PALOMAT[®] can handle all 4-way pallets in wood, plastic and metal no matter what the length, width or height.

We can customise the PALOMAT[®] 5 to exactly match the pallet size you use.
